How to -

DESIGN A SUCCESSFUL END OF TRIP FACILITY

1. Name the key element for making the entry to an EoT successful?
2. What could help lobbies become more active and lively?
3. What are some examples of accessibility (that aren't disabled toilets)?
4. What is a tool that can assist architects achieve the correct brief in early space planning?
5. A project requires X amount of bike racks for future demand but does not require them all to be built now - what is an example of potential use of this space?
6. What are the four sense elements that should also be considered when designing a space?
7. What are 3 of the 10 EoT project principles?
8. What is the Australian Bike Parking standard?
9. What is the minimum % of horizontal style racks required to make an accessible space?
10. What are the general wet area circulation requirements?
